In 1997 PVM-International was founded as a family venture for traffic project and sales management. Services on projects - that's the main focus of the company. Offered services are from complex projects down to the last detail.

Our services were tailored according to the specific request.

Transparency and reliability is the main trademark of the company. We measure our work in satisfied and confident clients. Our team PVM uses updated working technologies and working aids. Our personal are national and international experienced employees and approved specialists. As it clearly appears from our reference list we worked successful on national and international projects. Long term experience in successful finished projects makes us the unrivalled partner for your project. The business activity covers the areas of:

Traffic, infrastructure, environment, energy, telematics, privatization, human aid and agriculture.

The company analyzed, evaluated, develops, plans, supervised and realizes Projects. For instance in the area of traffic construction (railway construction) we cover the hole range of engineering, superstructure, civil engineering, structural and civil engineering signaling and safety system, telecommunication, heavy current engineering (high voltage engineering), overhead contact line construction.

The headquarter is situated in Plauen (Saxonia).

The international capacity to act on projects is guaranteed by agencies and consultants in Europe, southern America, and so on.

Our clients are mainly public utilities and international groups.
